Summary

Full Stack Developer specializing in the MERN stack with hands-on experience building and deploying full-stack applications. Experienced in React.js, Next.js, Node.js, Express.js, MongoDB, Redis, real-time communication, AI integrations, and local-first browser applications. Independently architected and shipped 4 full-stack applications spanning AI automation, WhatsApp CRM, browser-based media, and content generation.

Technical Skills

Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, Next.js, Redux Toolkit, Zustand, Tailwind CSS, GSAP

Backend: Node.js, Express.js, REST APIs, WebSockets (Socket.io), JWT Authentication

Databases & Storage: MongoDB, PostgreSQL, Redis, IndexedDB

Cloud & DevOps: AWS, Amazon S3, Docker, Docker Compose, GitHub Actions, Vercel, Render, Cloudinary

Tools & Practices: Git, GitHub, Postman, Zod, Multer, Vite, Data Structures & Algorithms, Agile, Code Reviews

Professional Experience

React Developer Intern

Dec 2024 – Mar 2025

Independent Internship | Gupshup Project

Remote

- Developed real-time chat interface components using React, TypeScript, and Socket.io, optimizing component rendering with React.memo, useMemo, and useCallback.
- Integrated REST APIs, WebSocket event flows, and authentication functionality while collaborating with the development team through Git feature branching, pull requests, and code reviews.

Projects

EngageAI — WhatsApp AI CRM | *MERN, Redis, Bull, Docker, WhatsApp Cloud API* | [Live](#) | [GitHub](#)

- Built a full-stack WhatsApp CRM on MERN, Redis, and Docker; queued Meta Cloud API webhook events via Bull for asynchronous processing, with an AI service generating automated replies and extracting leads from conversations.
- Implemented HMAC signature verification, Redis-backed rate limiting and daily AI token budgeting, and a Cloudinary + Tesseract.js OCR pipeline for document processing; containerized services with Docker Compose.

CreatDiv — AI Content Platform | *MERN, Next.js, Gemini API, Hugging Face, GSAP* | [Live](#) | [GitHub](#)

- Built a MERN-based AI content platform integrating Google Gemini for text rewriting, article generation, and resume analysis, with Hugging Face for text-to-image generation and MongoDB for persistent history.
- Implemented shared Zod validation across client and server, lazy-loaded routes for code splitting, a centralized API service layer, and reusable GSAP animation hooks across 6+ pages.

LearnX — Local-First Course Player | *Next.js, TypeScript, IndexedDB, File System Access API* | [Live](#) | [GitHub](#)

- Built a zero-backend, local-first course player using the File System Access API and IndexedDB, recursively converting local folders into structured courses with progress tracking, notes, and bookmarks stored entirely client-side.
- Implemented MPEG-TS playback with mpegts.js for browser-incompatible .ts video files, with per-lesson playback resume, timestamped notes, dashboard statistics, and Zustand state management.

Chatty — Real-Time Chat App | *MERN, Socket.io, Redux Toolkit, JWT* | [Live](#) | [GitHub](#)

- Engineered real-time bidirectional messaging and live user-presence tracking using Socket.io on a Node.js and Express.js backend, secured with JWT and HttpOnly cookie authentication.
- Managed global frontend state with Redux Toolkit and integrated Cloudinary with Multer for asynchronous media uploads without blocking the user interface.

Education

B.Tech in Computer Science & Engineering

Sagar Institute of Research & Technology (SIRT)

Bhopal, Madhya Pradesh

Advanced Full Stack Web Development

Apr 2024 – Present

AccioJob

Remote | MERN, React.js, Node.js, DSA, Project-based training
